

Full-Stack Developer — **Web, iOS & Android** · Backend · Databases · Server & Deployment
· **AI-Assisted** · SEO

✉ jcbloggerjc@gmail.com · 🌐 /fivecoinvest-blip

01 PROFILE

End-to-end full-stack: frontend → backend → databases → APIs → servers → deployment → iOS & Android, built as one system.
Fast learner: at home in existing codebases and quick to pick up new languages, frameworks and environments.
SEO trained: professional SEO background — every build is discoverable, fast and technically sound.
AI-augmented: deep coding knowledge means AI agents are guided and reviewed — never blindly trusted.

02 TECH STACK

03 WHAT I DELIVER

- **Full-stack web apps** — frontend + backend + API + database as one system
- **iOS & Android applications** — responsive, practical, easy to use
- **REST APIs, authentication**, business logic & third-party integrations
- **Database design** — modeling, SQL, CRUD, reporting, optimization
- **Admin dashboards, portals, e-commerce** & custom business systems
- **Server & deployment** — setup, DNS, SSL, Linux, production go-live
- **Maintenance, bug fixing** & working with existing codebases
- **SEO built-in** — audits, structure, metadata & performance

04 HOW I WORK

- **End-to-end ownership:** from idea and database to deployed product
- **AI-assisted development:** guide Cursor / Copilot, then review, test & debug
- **Clear communication** and reliable delivery of the technical side
- **Adaptable:** new languages, frameworks and environments — quickly
- **Quality-first:** fast, maintainable, performant, SEO-sound builds

"AI is not a replacement for programming knowledge — it's a tool that makes a knowledgeable developer more productive."
— my working philosophy

05 FULL-CYCLE DELIVERY

Development → Database → Backend / API → Server → Deployment → Maintenance
